Project name	Online School System (OSS)

1.Short project description (Business needs and system features)

The Online School System is an excellent opportunity for students to receive distance education online.

There are various subject which are provided by the school system rendered via video recordings of easily digestible information chunks in the form of main and sub topics.

Teachers can create courses on different subjects and provide materials for them.

By each material passed, the student receives points and gets rated respectively.

If anonymous, the student has the opportunity to access the free of charge courses, get informed about them, and review their materials, but not gain points and respectively get rated between the rest of the students. Registration gives students opportunity to participate in the paid courses and follow their own progress by gaining points and be rated among the other course participants.

Points can be awarded only once for course material passed. If students decide to review a course material in order to consolidate the material inside, they gain no points.

The students get access to the courses and their materials via a dash board where they can register and unregister to various courses, be displayed information about courses, materials, points and ratings.

Teachers and administrators have also their dashboard where they can administer students, update materials and give support to users about their accounts.

OSS has also administrators of the school management who can manage the online system and its users.

The system will be developed as a *Single Page Application (SPA)* using **React.js** as front-end, and **Node.js + hapi** as backend technologies.

Main User Roles

Anonimous Student

Can view the courses information pages and participate in the free courses with no possibility for following progress, gaining points for materials passed and be rated among the other students.

Registered User

Administrator

Extends Registered User. Can manage (create, edit user data and delete) all *Registered Users*, as well as *create courses and course materials*.

Teacher

Extends Registered User. Can create courses and materials to them.

Student

Extends Registered User. Can subscribe to various courses, follow their own progress, gain points for passing materials and be rated among the other course participants. They gain no points for passing a course material more than once.

2.Main Use Cases / Scenarios		
Use case name	**Brief Descriptions**	**Actors Involved**
2.1Browse all courses, learn from free courses, but not follow progress and be rated	The *User* can browse the information views (Home, Courses, About) in OSS SPA, and can learn from free courses, but no follow progress and be rated.	All users
2.2 Register	*Anonymous User* can register in the system by providing a valid e-mail address, first and last name, and choose password. By default all new registered users have *Student* role. *Administrator* can register new users by entering *User Data* and choosing a Role (*Student, Teacher*, or *Administrator*).	*Anonymous User, Administrator*
2.3 Change Data	*Registered User* can view and edit her personal *User Data*. *Administrator* can view and edit *User Data* of all *Users* and assign them *Roles*: *Student, Teacher*, or *Administrator*.	*Registered User, Administrator*
2.4 Manage Users	*Administrator* can browse and filter users based on different criteria: first and last name, email, Role. *Administrator* can choose a *User* to manage, and can manage the chosen User - edit, or delete. *Administrator* can create a new user.	*Administrator*
2.5 Browse Courses and Points	Students can browse the courses they have completed and points gained for each of them. Teachers can browse courses they have created.	*Student, Teacher*
2.6 Complete Course / Topic	Registered Student or Instructor browses available courses and materials and can sort and filter them using different metadata fields. Student or Teacher chooses a course / material to complete. OSS presents the Course materials one by one to the Student or Teacher, who follow them. On Course / Material completion the results are saved by OSS.	*Student, Teacher*
2.7 Add / Edit course /	Teacher or Administrator specifies/edits Course / Material meta-data	*Teacher, Administrator*

material	such as: name, subject, description, and tags. Teacher or Administrator can create/edit or delete specific materials supplied to course.	
2.8 Manage Courses	Teacher can browse their Courses and course materials, add new Courses and materials to them using Add/Edit at the dash board, and delete a Course / Material, as well as view the Students' progress. Administrator can browse courses of all Teachers, edit and delete them.	*Teacher, Administrator*

3.Main Views (SPA Frontend)		
View name	**Brief Descriptions**	**URI**
3.1 Home	Presents the introductory information for the purpose of the system as well as detailed instructions how to start using it. Prominently offers ability to register.	*/ /user*
3.2.Courses **3.2 .1 Available Courses**	Presents courses available according to *User's Role* and identity. Offers abilities to create, read, update, delete (CRUD), as well as browse *Courses. Display Points Gain in individual courses.*	*/courses* */userId/availableCourses*
3.2.2 Completed Courses	Display User's completed Courses and points.	*/userId/completedCourses*
3.2.3 Courses in Progress	Display User's Courses in progres and points.	*/userId/inprogressCourses*
3.3 Materials	Display the available educational materials inside a course	*/userId/inprogressCourses/Materials*
3.4 Material	Display the content of a user material from a course	*/userId/inprogressCourses/Material*
3.3 User Data **3.3.1 Personal Data**	Presents ability to view and edit personal *User Data*, as well as deregister from *OSS*.	*/userId/personal*
3.3.2 Rating	Display User's points and rating in regard to the rest of the course partakers.	*/userId/rating*
3.4 Users	Presents ability to manage (CRUD) Users and their User Data (available for Administrators only, as described in UCs).	*/users*

3.5 About	Presents information about the *OSS* project and its owner.	*/about*

4.API Resources (Node.js Backend)		
View name	**Brief Descriptions**	**URI**
4.1 Users	GET *User Data* for all users, and POST new *User Data* (Id is auto-filled by *OSS* and modified entity is returned as result from POST request). Available only for *Administrators*.	*api/users*
4.2 User	GET, PUT, DELETE *User Data* for *User* with specified *userId*.	*api/users{userId}*
4.3 Courses	GET courses (according to *User's Role* and identity) and POST new *Course* (Id is auto-filled by *OSS* and modified entity is returned as result from POST request).	*api/courses*
4.4 Course	GET, PUT, DELETE *Course*	*api/courses/{courseId}*
4.5 Course Materials	GET all Course Materials, be able to post new material	*api/courses/ {courseId}/courseMaterials*
4.6 Course Material	*GET, POST, UPDATE and DELETE Specific Course Material*	*api/courses/ {courseId}/courseMaterials/ {courseMaterialId}*
4.7 User Courses	*GET all User's Courses*	*api/users/{usertId}/courses*
4.8 User Course	*GET, PUT, DELETE course data for a User's individual course*	*api/users/{usertId}/courses/{courseId}*
4.9 User Course Materials	*GET all materials for an individual course of a User*	*api/users/{usertId}/courses/ {courseId}/materials*
4.10 User Course Material	*GET, PUT, DELETE a User's individual course material*	*api/users/{usertId}/courses/ {courseId}/materials/{materialId}*
